

100 Grade A Materiality Coverage	100 Grade A Controversy Risk Score	20 Grade F Scientific Alignment
--	--	---------------------------------------

Executive Summary

Acme Corporation has a high score in materiality and controversies but needs improvement in scientific disclosures.

Greenwashing Flags

- The company's reported CO2 emissions are significantly higher than the satellite data from Mauna Loa, indicating potential greenwashing; The company's reported metric is significantly higher than the satellite/scientific data; The company reported not disclosing any environmental metric, while the satellite data shows that fires are detected and the source is NASA FIRMS.

1. Materiality Analysis (SASB/GRI)

Coverage score: **100.0/100** — Evaluated against 10 SASB topic areas.

Topic	Present	Coverage	Missing Disclosures
Ghg Emissions	✓	100%	—
Energy Management	✓	100%	—
Water Management	✓	100%	—
Waste Hazardous	✓	100%	—
Biodiversity	✓	100%	—
Labor Practices	✓	100%	Total recordable incident rate (TRIR); Fatality rate (+1 more)
Supply Chain	✓	100%	—
Business Ethics	✓	100%	—
Board Diversity	✓	100%	—
Climate Risk	✓	100%	—

2. Controversy & Reputational Risk Log

Found **0 ESG controversies** in real-time news and databases.

No controversies identified.

3. Scientific Data Cross-Reference

Reported metrics compared against NASA FIRMS, NOAA GML atmospheric data, and ESA satellite datasets.

Metric	Reported	Satellite Data	Discrepancy	Risk
CO2 / GHG Emissions	891,000 metric tons	431.15 ppm atmospheric (Mauna Loa)	The company's reported CO2 emissions are significantly higher than the satellite data from Mauna Loa, indicating potential greenwashing.	80%
Methane (CH4)	4,200 metric tons	1945.85 ppb global mean (2025)	The company's reported metric is significantly higher than the satellite/scientific data.	80%
Deforestation / Fire Activity	Not disclosed	Active fire detections: unavailable (NASA VIIRS)	The company reported not disclosing any environmental metric, while the satellite data shows that fires are detected and the source is NASA FIRMS.	80%

4. Recommendations

1. The company should disclose its actual CO2 emissions in line with satellite data.
2. The company should provide a more accurate metric than the current one.
3. The company should ensure all environmental metrics are disclosed to avoid greenwashing.
4. The company should review and update its scientific disclosures to match the satellite data.
5. The company should consider hiring an independent third party for scientific reviews of its environmental metrics.

5. Evidence Trail

[GHG_EMISSIONS] report_text — Acme Global Corporation is a diversified industrial manufacturer with operations in 23 countries and approximately 87,000 employees worldwide. This report covers fiscal year 2024 performance against o

[ENERGY_MANAGEMENT] report_text — The report does not contain specific numbers for total energy consumed, percentage of renewable energy, or energy intensity. However, it mentions that the company has committed to a 50% absolute reduc

[WATER_MANAGEMENT] report_text — The report excerpt does not contain specific disclosures related to water stress regions, methane emissions, energy consumption, waste management, biodiversity, or any other required disclosure.

[WASTE_HAZARDOUS] report_text — Acme Global Corporation is a diversified industrial manufacturer with operations in 23 countries and approximately 87,000 employees worldwide. This report covers fiscal year 2024 performance against o

[BIODIVERSITY] report_text — Two of our manufacturing sites border Ramsar wetland areas (Thailand and Brazil). We have committed to no net deforestation in our supply chain by 2025. Our land use practices are aligned with the RED

[LABOR_PRACTICES] report_text — The report provides information on the total number of employees, women in workforce, safety performance, employee turnover, and collective bargaining coverage. It also mentions that the company has a

[SUPPLY_CHAIN] report_text — The report does not provide specific numbers for the percentage of Tier 1 suppliers audited against ESG criteria, but it mentions that 67% of them were audited. It also states that 8.2% of suppliers f

[BUSINESS_ETHICS] report_text — The report excerpt does not contain specific disclosures related to total amount of monetary losses from legal proceedings or description of policies and practices for prevention of bribery. However,

[BOARD_DIVERSITY] report_text — The report excerpt does not contain specific disclosures related to the percentage of gender diversity on the board, percentage of independent directors, or ESG oversight structure. However, it mentio

[CLIMATE_RISK] report_text — We conducted a climate scenario analysis aligned with TCFD recommendations using 1.5°C, 2°C and 4°C pathways. Physical risks identified: Coastal flooding at two manufacturing facilities (medium risk,

[GHG_EMISSIONS] NOAA GML Mauna Loa — The company's self-reported CO2 emissions of 891,000 metric tons are much higher than the satellite data showing a concentration of approximately 431 parts per million (ppm) in 2026.

[GHG_EMISSIONS] NOAA GML Global CH4 — The company's reported value of methane emissions is likely a self-reported figure rather than an accurate measurement, as it does not match the satellite/ scientific data from NOAA GML Global CH4.

[BIODIVERSITY] NASA FIRMS (unavailable) — The discrepancy in this case is due to the lack of transparency from the company regarding their environmental metrics. The satellite data provides a clear indication of fire activity, which contradic
