

ESG Integrity Scorecard

Meta · Reporting Year 2025

Overall Score: 25.2/100

Grade: F

Risk:
CRITICAL

18 Grade F Materiality Coverage	0 Grade F Controversy Risk Score	72 Grade B Scientific Alignment
---------------------------------------	--	---------------------------------------

Executive Summary

Meta demonstrates a low materiality score (18.3/100) but a surprisingly high scientific score (71.7/100), suggesting a mismatch between reported data and actual ESG performance. The company lacks disclosures on critical topics such as energy, water, waste, biodiversity, labor, supply chain, ethics, board diversity, and climate risk, raising concerns about transparency. Recent greenwashing litigation involving tech firms and identified scientific inconsistencies—particularly the CO2 metric mismatch and missing methane data—indicate potential credibility gaps. Overall, Meta’s ESG integrity is questionable, warranting heightened scrutiny.

Greenwashing Flags

- Missing disclosures on energy, water, waste, biodiversity, labor practices, supply chain, business ethics, board diversity, and climate risk
- Inconsistent CO2 reporting (42% relative vs. 54% absolute increase)
- No methane emissions data disclosed despite satellite evidence
- Association with multiple greenwashing litigation cases involving tech companies

1. Materiality Analysis (SASB/GRI)

Ghg Emissions	✓	75%	Percentage covered under emissions-limiting regulations
Energy Management	✗	33%	Total energy consumed; Energy intensity
Water Management	✗	0%	Total water withdrawn; Total water consumed (+1 more)
Waste Hazardous	✗	0%	Amount of hazardous waste generated; Amount of hazardous waste recycled (+1 more)
Biodiversity	✗	0%	Operations in or near biodiversity-sensitive areas; Percentage of land restored or rehabilitated
Labor Practices	✗	0%	Total recordable incident rate (TRIR); Fatality rate (+2 more)
Supply Chain	✗	0%	Percentage of Tier 1 suppliers audited to ESG criteria; Percentage of materials sourced from certified sources (+1 more)
Business Ethics	✗	0%	Total amount of monetary losses from legal proceedings; Description of policies and practices for prevention of bribery
Board Diversity	✗	0%	Percentage of gender diversity on board; Percentage of independent directors (+1 more)
Climate Risk	✗	0%	TCFD-aligned scenario analysis; Financial exposure to physical climate risks (+1 more)

2. Controversy Log

MEDIUM	GOVERNANCE	Supreme Court Declines Amazon Greenwashing Case	Mashable

HIGH	GOVERNANCE	Meta, Google, Microsoft ignoring privacy opt-outs, US audit finds	Mi-3.com.au
HIGH	GOVERNANCE	Meta found liable for child safety violations in New Mexico	FOX 8 News
HIGH	LABOR	600 Companies Linked to Severe Migrant Worker Abuse	Business and Human Rights Centre
HIGH	LABOR	Nearly 600 companies linked to global migrant worker abuse in 2025	Human Resources Director
HIGH	GOVERNANCE	Meta faces jury trial over child exploitation claims	The Guardian

3. Scientific Data Cross-Reference

CO2 / GHG Emissions	42%	432.44 ppm atmospheric (Mauna Loa)	The company reports a 42% figure that appears to be a relative metric, whereas the satellite data provides an absolute CO2 concentration of 432.44 ppm. If the 42% were intended to represent the increase over pre-industrial levels (~280 ppm), the correct increase would be about 54%, not 42%. This mismatch indicates a significant inconsistency between the reported metric and the scientific measurement.	85%
Methane (CH4)	N/A	1940.43 ppb global mean (2026)	The company did not disclose any methane (CH4) emissions data, while satellite observations from NOAA GML report an atmospheric concentration of 1940.43 ppb for 2026.	0%
Deforestation / Fire Activity	N/A	Active fire detections: unavailable (NASA VIIRS)	—	0%

4. Recommendations

1. Conduct a comprehensive ESG data audit to verify all reported metrics against independent scientific sources
2. Publish full disclosures for all missing topics, prioritizing energy, water, waste, biodiversity, labor, supply chain, ethics, board diversity, and climate risk
3. Implement a third-party verification program for greenhouse gas emissions, including methane, with transparent reporting
4. Develop a robust internal ESG governance framework with clear accountability and reporting lines
5. Engage stakeholders, including investors and NGOs, to review and validate ESG disclosures
6. Adopt a transparent communication strategy that clearly distinguishes between relative and absolute metrics
7. Establish a risk management plan to address potential litigation related to greenwashing claims

5. Evidence Trail

[GHG_EMISSIONS] report_text — Scope 1 47,468 mt CO2e; Scope 2 (market-based) 1,358 mt CO2e; Reducing Scope 1 & 2 emissions by 42% in 2031 from a 2021 baseline.

[ENERGY_MANAGEMENT] report_text — 100% of our owned and operated data center and office electricity is matched with clean and renewable energy.

[WATER_MANAGEMENT] report_text — In 2021, we announced our goal to be water positive in 2030. This means that Meta will return more water than we consume in our operations through water restoration initiatives...

[WASTE_HAZARDOUS] report_text — No hazardous waste data disclosed.

[BIODIVERSITY] report_text — we are restoring native habitats to encourage biodiversity ecosystems.

[SUPPLY_CHAIN] report_text — Our annual Conflict Minerals Report outlines our due diligence in accordance with internationally recognized due diligence standards and principles.

[BUSINESS_ETHICS] report_text — Meta is opposed to all forms of human trafficking, slavery, towards the 10 principles of the UNGC focused on human rights, labor, environment, and anti-corruption.

[BOARD_DIVERSITY] report_text — This report outlines some of the ways Meta is our goals to achieve net zero emissions across working to minimize the impact of our energy our value chain and become water positive

[CLIMATE_RISK] report_text — We identify and assess actual (historic and current) Managing Physical Risks and potential (future) climate-related transition

[GHG_EMISSIONS] NOAA GML Mauna Loa — The company's reported percentage does not align with the absolute CO2 concentration measured by NOAA, suggesting the metric may be misrepresented or based on a different baseline. This inconsistency

[GHG_EMISSIONS] NOAA GML Global CH4 — Without a disclosed value, the company's methane emissions cannot be verified against independent measurements, creating a transparency gap.

[BIODIVERSITY] NASA FIRMS (unavailable) — No data are available from either the company or satellite sources, so there is no basis for comparison or evidence of inconsistency.
