

ESG Integrity Scorecard

Meta Reporting 2025 · Reporting Year 2025

Overall Score: 88.2/100 Grade: A Risk: LOW

82 Grade A Materiality Coverage	76 Grade B Controversy Risk Score	69 Grade B Scientific Alignment
--	--	--

Executive Summary

This is a sample scorecard used to preview PDF layout and font/color formatting.

Greenwashing Flags

- Overly broad renewable energy claim

1. Materiality Analysis (SASB/GRI)

Coverage score: **82.0/100** — Evaluated against 10 SASB topic areas.

Topic	Present	Coverage	Missing Disclosures
Ghg Emissions	✓	85%	—
Water Management	✗	40%	Water withdrawal by region; Water recycling targets

2. Controversy & Reputational Risk Log

Found 1 **ESG controversies** in real-time news and databases.

Severity	Category	Title	Source
HIGH	SUPPLY_CHAIN	Recent supply chain pollution incident	Example News

3. Scientific Data Cross-Reference

Reported metrics compared against NASA FIRMS, NOAA GML atmospheric data, and ESA satellite datasets.

Metric	Reported	Satellite Data	Discrepancy	Risk
CO2 emissions	6.2 MtCO2	7.1 MtCO2	Reported value appears understated by ~14%.	72%

4. Recommendations

1. Clarify Scope 3 emission accounting and publish methodology.
2. Strengthen water stewardship disclosures with quantitative targets.
3. Validate controversy claims with third-party assurance.

5. Evidence Trail

[SUPPLY_CHAIN] Example News — Local NGO reported a factory discharge incident...

[EMISSIONS] ESA Sentinel-5P — Satellite-derived CO2 emissions indicate higher levels than reported.
